

4000th Valve Made in China

Another milestone reached on our journey with the 4000th valve made in China to the exacting standards of Euro Chlor, the Chlorine Institute and the European PED. This milestone valve was part of a consignment bought by a chlor-alkali producer in Taiwan for VCM & EDC services. Congratulations to everyone in the Hunt & Mitton Team.

Hunt & Mitton Continue CE Marking for Europe

We have transferred our notified body and competent body certification to Lloyds Register in Netherlands and Spain so that we can seamlessly continue to CE mark our products in accordance with the Pressure Equipment Directive for the European Union following the completion of the Brexit process.

Hunt & Mitton Range of Pneumatic Rolling Diaphragm Actuators

We now have available our own range of actuators for our control valves (5601, 5801 Series) and actuated ON/OFF valves (8850, 8851 Series). The actuators cover a maximum stem travel of 75mm with thrusts up to 50,508 Newtons. They are manufactured to the same high level of detail and use the same high quality materials as our range of valves. The diaphragms are tested with over 1,000,000 cycles to ensure years of operational ability.

With the options of single, double or triple stacked units, the actuators can be supplied with a range of accessories including handwheels for manual closing. They are also available in a FAIL open or FAIL closed configuration to suit the process application.

Valves for India

A quantity of 33 actuated and control valves in sizes 1" to 6" has been completed on schedule for a large end user in India. They have now been inspected, packed and despatched. The valves will be used on chlorine service, showing the end users confidence in our products.

New English Product Range Brochure Now Available

A new English Language version of our product range brochure is now available as a pdf file via our web site <https://www.huntandmitton.com/downloads>

A new Chinese Language version will be available soon.
