

Chlorine Control Valves - The UK's leading Ethylene Dichloride (EDC) production facility has awarded their largest chlorine control valves to Hunt & Mitton. The EDC is used to produce PVC at another of the groups facilities in Germany. The end users faith in our ability to manufacture a leading Chlor-Alkali control valve design and meet the most stringent traceability standards is a great compliment to our technical and production services. The valves are currently in production and will be delivered in Q4 this year. The valves will be installed and commissioned by a leading global EPC company who were chosen to complete this large design and installation project. We look forward to working with both of these organisations in the future.

Lomon Billions Selects Hunt & Mitton— with a turnover in excess of \$2.0 billion USD, Lomon Billions has grown to become the largest titanium dioxide producer in Asia. At one of their seven production facilities in which they have significantly upgraded the production efficiency and capacity, they chose Hunt & Mitton's products of manual, actuated and control valves to improve reliability in their operational processes. We are proud to have secured this first project order for 62 units of our products with such a strategic end user. This plant is using the very latest technology in the production of titanium dioxide derivatives. The Company is committed to the transformation, upgrading and improvement of its industrial manufacturing chain and strives to be a leading integrated service supplier of titanium dioxide pigment and titanium derivatives worldwide.

Re Certification awarded to HMV Dafeng—Congratulations to everyone involved in the re certification of HMV's manufacturing facility in Dafeng. In the month of July we achieved re certification of ISO 9001 2015 from Lloyds Register, PED Quality Management System Module H for all of our products, and the new UKCA certification for the Pressure Equipment (Safety) Regulations. Our certificates are now valid through to 2024. This gives our customers and confidence that we continue to pay great attention to detail and adhere closely to the requirements to continue to constantly improve our people and processes in manufacturing high quality valves.

News from the USA - Our Master Distributor CHEMFLOW Products, has had a busy summer of writing valve specifications for the major North American Chlor-Alkali Producers. A number of lengthy valve field service trials concluded at the end of 2020 with excellent performance reported by all parties. Specification work with two of the three major Chlor-alkali producers is complete and all producer companies' specification work should be complete by end of 3rd Quarter 2021.

CHEMFLOW expects a significant increase in sales going forward as market share shifts from the European brands to HMV. Mike Johnson the President of CHEMFLOW said, **'We would like to thank the HMV team for their excellent support and more importantly, the world class quality they build into every Hunt & Mitton Valve.'** Great work from Mike and his team for the specification and approval work completed and for laying the foundations for more sales that will see our market share in the USA increase.
