

## Hunt & Mitton Valve Company Begins a New Chapter

To accommodate our growing customer requirements and to ensure future manufacturing capacity we have moved our business into larger premises in the same area of Dafeng, thereby retaining our dedicated and trained staff for our Bellows Seal Globe Valve Products. The official move took place on 6th July with an official opening ceremony that took place with local Dignitaries, Management and Staff. The new premises have a total foot print of 3,700 m<sup>2</sup> and enables additional equipment and process improvements in manufacture. We look forward to welcoming our international distributors and customers to our new facilities.

## Hunt & Mitton Approved in Brazil

Following on from our very successful Clorosur Exhibition in Brazil, our products have now received official approval from one of the largest chlor-alkali producers in Brazil. This has been driven by our exclusive distributor EBP Engineering Solutions who have supplied them with multiple valve sizes including a DN350 Bellows Seal Globe Isolation Valve for chlorine service. We look forward to continuing our supporting of another new customer in Brazil.

## Hunt & Mitton Chosen for phase 2 in Yunnan Province

When the owners decided to expand their plant's production of speciality chemicals, it required an increased volume of chlorine gas and more valves handling the unusually high temperature gas. Having supplied the original high temperature chlorine gas valves on phase one, they were happy to continue to use Hunt & Mitton on phase 2. An additional 70 units has been supplied including 4 x DN450 8851 actuated bellows seal globe isolating valves. High praise indeed from another satisfied customer gaining the benefits of high quality products delivered on time.

## Sustainability and Operational Cost Savings are Impressive.

At a chlorine burner plant in South Africa where they produce Hydrogen Chloride Gas, the end user was having to stop production for maintenance on their old control valve every 3 weeks. Having taken the advice from our exclusive distributor AVS and changed to Hunt & Mitton bellows seal globe control valves, they now report all well after 6 months of operational service, with no loss of production time. The plant management are very happy with their choice and are counting the sustainability and operational cost savings so far which they have confirmed to be considerable and counting. Our control valves have already lasted 6 times longer than their predecessors.
